

1. Coming to Lab Part - we are primarily focusing on:

- ☐ Cloud Computing
 - Amazon Web Services
 - Microsoft Azure
 - Google Cloud Platform

- ☐ Data Science
 - Jupyter Labs

1. To host Labs, we have two ways -

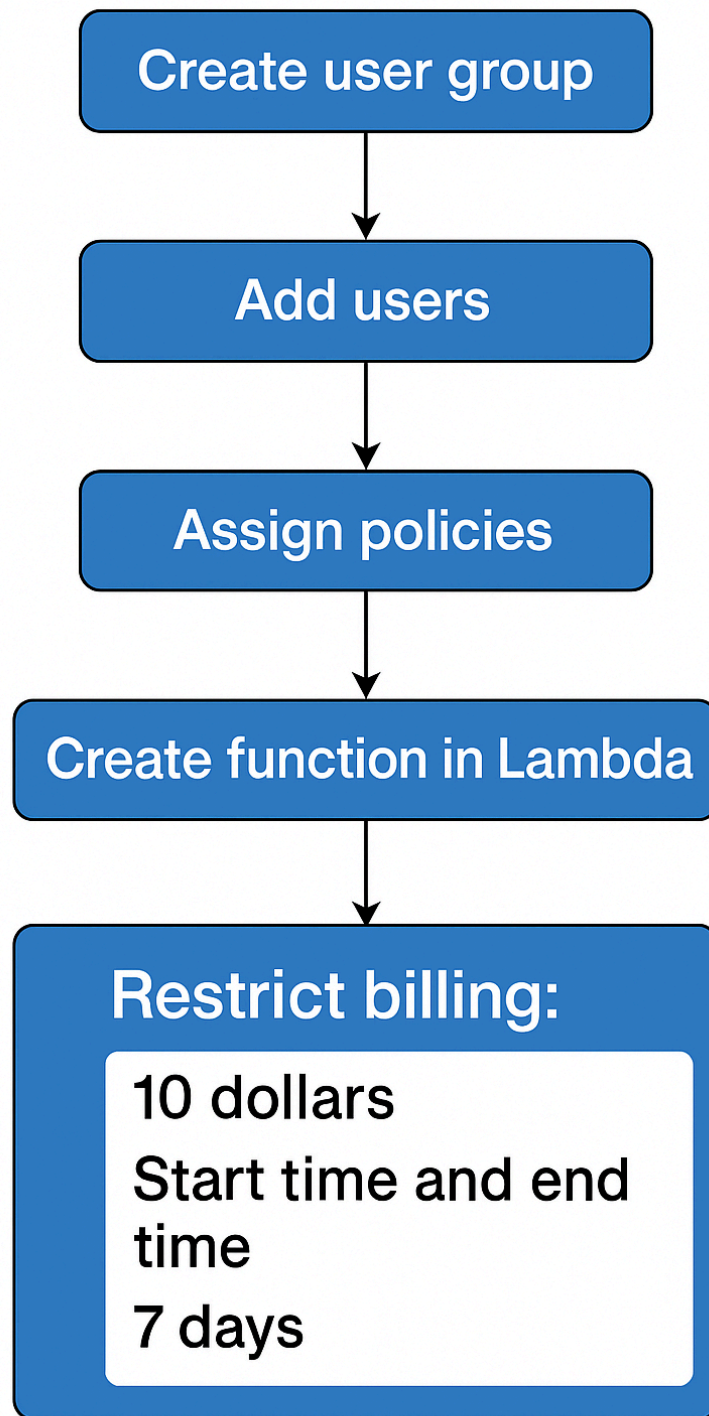

- Manual
- Automated

— Manual Way

- ➔ We manually create X number of users for the client
(On Request)
- We need to make a note of:
 - ☐ No. of Users
 - ☐ List of Services

- ☐ Pricing
- ☐ No. of Days

Model Architecture:

— Automated Way

➔ When a user requests X no. of accounts:

- ☐ Single Sign-On (which provides temporary credentials)
- ☐ List of Services
- ☐ Regions - we allow
- ☐ Billings Restricted
- ☐ Time slots (start time & end time)
