Day 1 - We have started working on our LMS (Learning Management)

1. We have used CPanel - (Under Software: Softaculous App Installer to download the application named MOODLE.)

2. We have registered a Domain Temporarily "karpavai.cloud4green.com"

3. MyTrueHost is our Web-Hosting Partner - By default, we are given X-GB of RAM

   Note: Here, X refers to a number.

4. In the long run, we have two ways to deploy our LMS
   - AWS Moodle Plugin (or)
   - To host it on our EC2 Machine that runs "24/365"

5. To provide a seamless interface and experience (Main components)

- ☐ Course Content (curriculum)
- ☐ Video Lectures
- ☐ Assingments
- ☐ Quiz
- ☐ Weekly Exams
- ☐ Built-In Lab Console
- ☐ Completion Certificate
